

LEDlicht NEDERLAND

For people and planet

LEDlicht Nederland develops and manufactures high quality LED lighting for utilities, industry and public places. Not only are sales high on the agenda but the source of and the type of materials used for production are certainly just as important.

During the manufacturing process, emphasis is put on:

- The quality of the light and the product.
- An environmentally friendly production process.
- The products are, to the largest possible extent, manufactured in The Netherlands.
- Preventing child labour in the production process not only in, for instance, resource extraction.
- Initiating projects aimed at daily activities and the employment of socially involved organisations.
- Aiming for Cradle to Cradle.
- Environmentally friendly packaging.
- Easy to assemble products.

We believe in quality of all our products. No concessions are made in any way to the quality of both parts and the end products. No

time is spared in the development of our products, 100% customer satisfaction is of paramount importance regarding both quality and performance of the LED lighting.

A summary of the advantages of our lighting:

- Decrease in energy consumption, maintenance costs and CO2 emissions.
- Short payback periods.
- Optimal lighting.
- Socially responsible production and assembly..

Our product range is particularly suitable for:

- Non-residential construction.
- Industry.
- Sites and public places.

We would be happy to arrange an advisory meeting; this will, of course, not oblige you to anything!

LEDlicht Nederland BV is a 100% subsidiary of MO-Invest BV.
